About us

Our Mission

LIBIS is an **IT organization** and **scientific service provider** within KU Leuven, responsible for the implementation and management of specialized systems and digital processes to support the **findability**, **accessibility**, **interoperability** and **reusability** of the various collections and research data of **KU Leuven**, the **Association** and its **partners**.

We use our data-driven **expertise** in national and international **collaborations** with research groups in the development of **virtual research environments** from proposal to realization. By participating in (inter)national **projects**, **networks** and **research**, LIBIS contributes to the **innovation** of scientific collections and **data infrastructures** and shares this expertise with third parties.

LIBIS stands for **sustainability**, we are always looking for **synergies** and are responsible for the **long-term management** of the systems and processes resulting from our **partnerships**.

Our Approach

Open

Our solutions can integrate easily with other systems without giving up your authenticity. We achieve this by using international standards and choosing flexible products that we can adapt to your needs.

Sustainable

We go for the long term and opt for stable and reliable suppliers to build a strong foundation for our services. Sustainability of our solutions also means that we think along with our partners and look at the needs in a broader context.

Innovative

Future-oriented thinking and constantly evolving, enabling us to propose the best solution for changing needs. We like to share the knowledge and expertise we acquire in innovative projects with our partners.

LIBISnet

Home   Heritage professionals   Archive professionals   **Library professionals**

Library professionals

For more than forty years, LIBIS has been offering library software to both scientific, private and public organizations. LIBISnet is the largest scientific library network in Belgium and was created from the need of KU Leuven to be able to access and manage its library collections in an efficient manner. By joining LIBISnet you benefit from the scale and knowledge of our network.
LIBISnet uses advanced library software (Alma and Primo from Ex Libris) that perfectly meets the needs of contemporary libraries and documentation centers to manage and unlock all their collections (print, electronic and digital). Both Alma and Limo are cloud solutions and can be implemented separately or together, and they both connect seamlessly with other systems. LIBISnet partners can call upon our expertise, project support, online helpdesk system, training and networking moments such as the LIBISnet user day.

Alma

Alma is a state-of-the-art unified library management system. It is an integrated solution for all your materials, so you can manage all your materials in one central location using the same environment. It has flexible and advanced configuration options for all your work

Limo

Limo is based on the Primo software by Ex Libris. Primo is more than an OPAC, this discovery tool searches and gives access to a variety of sources in various formats (physical, online, digital).
