

Alma: exhaustieve lijst van BIB tags

Laatste update: 16/09/2015

De onderstaande tabel biedt een volledig overzicht van alle bibliografische (BIB) MARC-tags die gedefinieerd zijn binnen het LIBISnet-dataprofiel voor Alma. Per tag wordt ook aangeduid welke de mogelijke indicatorwaardes zijn en welke subfields voor die tag gedefinieerd zijn.

De verschillende kolommen bevatten de volgende gegevens:

- **Description:** de naam van de tag zoals deze ook wordt weergegeven bij een *mouse over* voor die tag in de Alma Metadata Editor
- **Tag:** de tagcode zoals deze moet worden ingegeven in de Alma Metadata Editor bij het toevoegen van een nieuw veld in template of record
- **Ind 1 / Ind 2:** de waardes van de eerste en tweede indicator. Indien voor een bepaalde tag meerdere indicatorcombinaties mogelijk zijn, wordt de betekenis van de individuele combinaties duidelijk uit de aard van de subfields of wordt dit verduidelijkt tussen () in de kolom *Data* bij het eerste subfield
- **Subfield:** de subfieldcodes van alle beschikbare subfields.
- **Data:** omschrijving van de aard van de gegevens die in het genoemde subfield kunnen worden opgenomen
- **Data entry tool:** in deze kolom worden de hulpmiddelen aangeduid die de catalograaf ter beschikking heeft om de correcte waarde in te voeren in het subfield. Deze hulpmiddelen zijn:
 - **Form Editor:** een invoerformulier dat toelaat om de afzonderlijke delen van een tag één voor één in te vullen, vaak gecombineerd met een keuzelijst van mogelijke waarden. De Form Editor wordt opgeroepen via het menu Edit of de toetsencombinatie Ctrl+F
 - **System Gen:** systeemgegenerateerde waardes waar de catalograaf niets aan moet/mag wijzigen
 - **CV list:** subfield dat gecontroleerd wordt door een beperkte lijst van mogelijke waarden (Controlled Vocabulary of CV). De lijst met mogelijke waardes kan worden zichtbaar gemaakt door de cursor vlak achter de subfieldcode te plaatsen.
 - **Field control:** invoer op basis van authority records of eerder ingevoerde waarden in andere bibliografische beschrijving. Een lijst van mogelijke authority en/of bibliographic headings wordt opgeroepen door de eerste karakters van de gezochte waarde in te voeren en vervolgens op F3 te drukken
 - **Autocomplete:** automatische aanvulling van de ingevoerde waarde. Zodra er drie karakters zijn ingevoerd, wordt een lijst getoond met overeenkomende waarden uit andere bibliografische records. De correcte waarde kan uit die lijst geselecteerd worden.
